Open Agile Architecture™ Practitioner

Certification for the Open Agile Architecture™ Practitioner demonstrates that the individual possesses knowledge and understanding of how to apply best practices and techniques for architecting with agility.

The learning objectives at this level focus on application and analysis in addition to knowledge and comprehension.

Takeaways

Certified individuals will have the following takeaways:

- An understanding of the importance of architecture when deploying Agile at scale
- An ability to apply best practices and techniques for architecting with agility
- An ability to deliver Agile Architecture in support of Digital Transformation
- A common language with Enterprise Architects and Agilists

Target Audience

- Suitable for any role involved in Digital Transformation at an architectural level
- Agilists and business managers who need to understand the importance of architecture when shifting toward an Agile at scale model, and who want to extend their skills
- Digital architects working in outcome-based, team-led, and product-centric organizations
- Enterprise Architects, Solution Architects, Security Architects, and Software Architects who want to extend their scope in an Agile at scale world

The Value of this Certification

Certified individuals will have demonstrated their understanding of:

- The role of architecture when deploying Agile at scale
- Insights into business agility
- Intentional Architecture and Continuous Product Development
- The characteristics of an Agile organization
- When and how to use the Open Agile Architecture building blocks
- The axioms for Agile Architecture
- The mental model that Agile Architecture requires
- Techniques and best practices for Digital Transformation and digital products
- How to apply Lean Value Stream Mapping through a case study
- The different types of Agile Architecture, and when to apply them

- Agile Security Architecture including the role of the Agile Security Architect
